

tiella[™]
real light, real simple

Rail 6-23
Hand-bendable
low-voltage Rail.

MonoPoint 24-31
Low-voltage canopy
and element options.

Real Lighting For Better Living

Looking for a way to easily add light, shape and color to a space? Searching for quality and affordability in the same package? Choose tiella™. We offer premium design possibilities, and we make them simple.

Our product offering includes Rail, a low-voltage system that offers design flexibility. Hand-bend your Rail system, then customize by choosing from a full line of colorful Pendants or Heads. Or, select from the same elements and display them from canopies using the MonoPoint systems. Complete the look by adding a matching Wall Sconce or Ceiling fixture. Dress up your bathroom with a Vanity Bar. The possibilities are endless. Add your own sense of style to virtually any space.

tiella is one of North America's best low-voltage architectural lighting brands. All tiella products are very easy to install, and we have you covered with world-class customer service and support.

How to Use This Catalog

Begin by choosing the product best suited for your project. The "Product Offering" section on pp. 2-3 provides an overview. Then each section of the catalog describes a product category in detail.

Our "Rail" section contains step-by-step instructions on how to put a system together and a quick overview of its compatible elements.

All pendants and heads in the "Elements" section have a key illustrating the type of lamp and maximum wattage—use this information to determine the total wattage needed for your Rail system to help you choose a transformer. Refer to pp. 32-55 for detailed information about elements, including dimensions and color options.

The "Rail" section emphasizes the most common Rail system components. For more complex applications, our "Special Installations" pages give you more options so virtually any layout you imagine can be achieved with standard, readily available components.

This catalog also features item number grids for ease of ordering. For example, here is the grid for a Sola head:

800	SYSTEM	SLH	LENGTH (A)	FINISH
	MP MonoPoint		03 3"	Z Bronze
	RL Rail		06 6"	S Satin Nickel
			12 12"	
			18 18"	

Note: The default characters of the item number are bold. Select from the choices below each option field to build the complete item number.

About Finishes

tiella™ products are available in three standard finishes:

Bronze: Plated or powder coat finish featured on select Rail, MonoPoint, Wall, Ceiling and Easy Kit based products.

Satin Nickel: Brushed nickel plated finish, featured on Rail, MonoPoint, Wall and Ceiling products.

Matte Nickel: Nickel powder coat finish, featured on many of our Easy Kit based products.

Some canopy housings are also available in Black and White. Some Easy Kits are also available in White.

How to Buy tiella

For the Consumer-

Our products are available through lighting showrooms throughout North America. For showrooms in your area, please visit our website: www.tiella.com.

For the Lighting Professional-

Our products are available through a network of knowledgeable sales representatives. For a representative in your area, please visit our website, www.tiella.com, or call us at (847) 410-4400.

Certain products shown in this catalog have patent protection or patents pending. © 2008 tiella. All rights reserved. The "tiella" graphic is a registered trademark of tiella. tiella reserves the right to change specifications for product improvements without notification.

Basics

1 Design Your Rail System

The first step in designing your Rail system is to determine what you are trying to light. You will need to decide where the heads or pendants should be installed to put light where you want it. See Compatible Elements on pp. 14-15 for thumbnails of all available elements with lamp type and maximum wattage. Refer to indicated pages for detailed specifications.

Draw your Rail run. Remember, Rail can be shaped by hand to follow architectural details or to create an organic shape. Factory pre-bent shapes are also offered in several configurations. Your Rail must be placed so it runs directly beneath either the junction box with surface transformer or the power feed canopy and intersects the locations of the elements. Determine how many pieces of Rail you will need (p. 16). Add an end cap to each end of the run for a finishing touch (p. 17).

2 Add Power and Hardware to Complete the System

Add up the wattages of the lamps you'll be using on the system; this will help you select a transformer. A remote transformer with power feed canopy provides the cleanest look, but the remote transformer must be installed in an accessible, remote location. A surface transformer simply mounts to a junction box. Use the information on p. 84 to help you choose the right transformer for your installation; see pp. 18-19 for Rail transformers and power feed options.

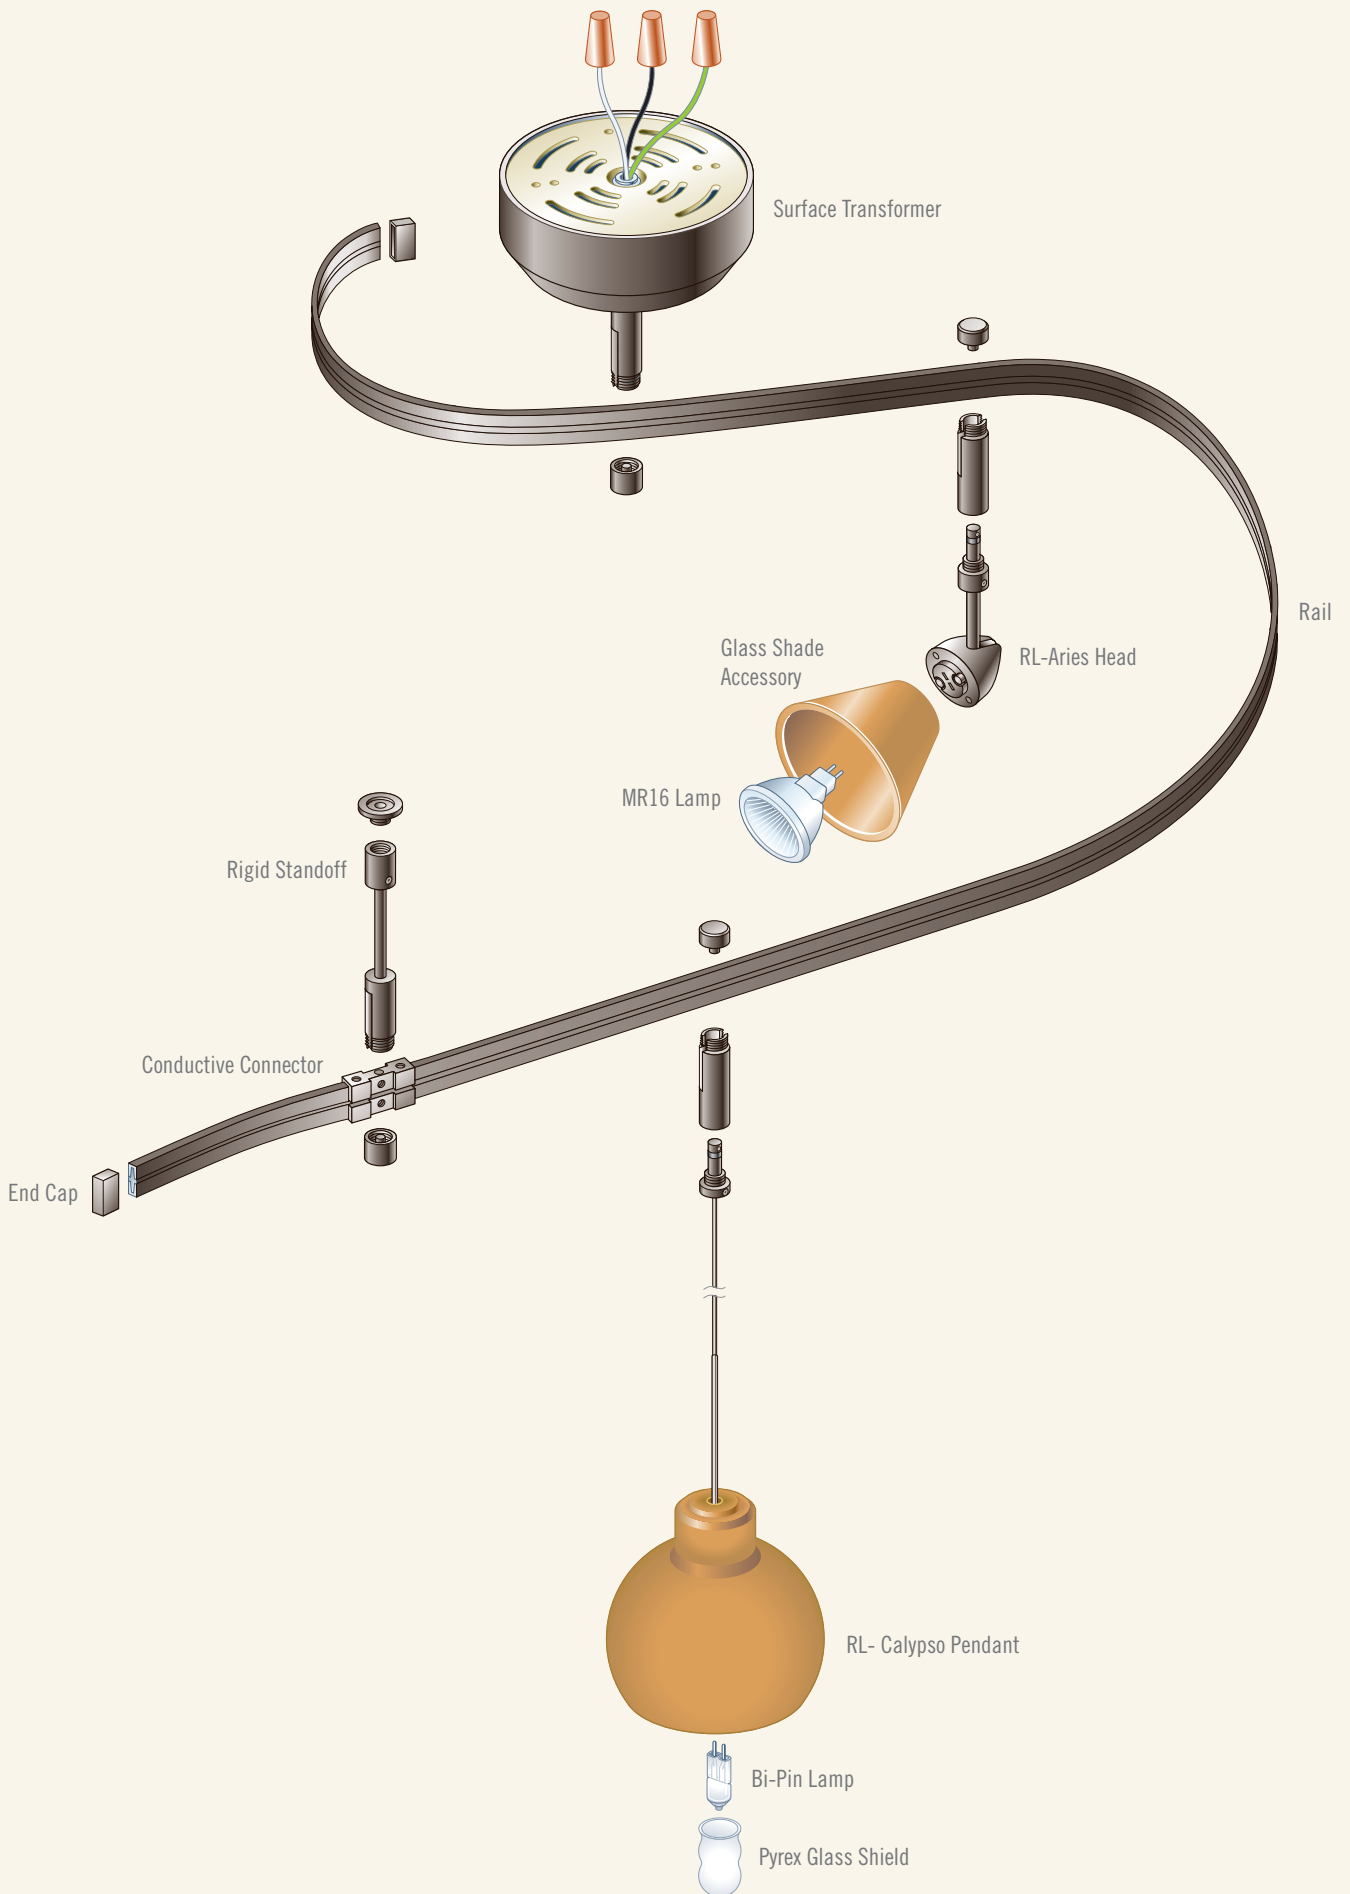

Determine how far from the ceiling you want the system to drop. Power feed canopies place the rail two inches from the ceiling; surface transformers drop it from 3.5 to 5.5 inches, depending on the type of transformer. If this drop is shorter than you require, you'll need to add a power extender (p. 19) to your canopy or surface transformer. The maximum standard drop for a Rail system is eight feet.

Next, add standoffs that match the drop of your power feed to support the system (p. 17). Adjustable standoffs provide a clean look. Choose rigid standoffs for curvy runs, or runs with multiple glass pendants. You will need one standoff for every three feet of rail. The power feed may be considered as a support, so begin adding standoffs three feet from the power feed. Note: Power extenders and standoffs are field-cuttable, so it's easy to achieve a custom drop length.

Rail can do almost anything. For other Rail system options, such as mounting to a vaulted or T-bar ceiling, see Special Installations on pp. 20-21.

Compatible Elements

Shows lamp type and maximum wattage.

All of the elements shown on these pages are available for the Rail system. Refer to the indicated pages for color options, specifications, and ordering codes.

*Shown accessorized. Accessories sold separately. For accessory options refer to the indicated pages.

Rail

Bronze

Satin Nickel

Shown actual size

Rail

Hand-bendable (horizontal only), field-cuttable Rail is rated for 300 watts at 12 volts. Each piece of Rail is shipped with a conductive connector to join Rail pieces end to end. Order additional connectors (p. 17) if cutting and rejoining rails.

800RLA	LENGTH (A)	FINISH
48	48"	Z Bronze
96	96"	S Satin Nickel

TIP: To calculate the amount of Rail you'll need for an organic shape, draw the Rail run to scale (for example, 1/4" = 1'). Use a piece of string to "trace" the drawing. Measure the length of string, then convert from your scale.

Standard Rail bends horizontally to a radius as small as 6". For custom factory bends, provide degree and radius of curve.

Pre-Bent Rail

Rail bends very easily by hand to almost any imaginable shape, but we also offer the following pre-bent Rail options to make the most common bends perfectly shaped and even easier to install. For a factory bend not shown below, please call for a custom quotation.

Pre-Bent S Curve Rail

Rail pre-bent into a horizontal S curve. Consult the drawing for approximate dimensions.

800RLBHC60	FINISH
Z	Bronze
S	Satin Nickel

Pre-Bent 90° Curve Rail

Horizontal 90° curves are sold by radius, or the distance from the center of the circle to the outside edge. Join four 90° curves to create a circle with a diameter (overall width) equal to twice the specified radius.

800RLBH90	RADIUS	FINISH
12	12"	Z Bronze
24	24"	S Satin Nickel
36	36"	
48	48"	
60	60"	

Connectors & Standoffs

Connectors

End Cap

The decorative end cap fits onto the end of the Rail run for a finished look. Order one for each end.

800RLCCAP	FINISH
Z	Bronze
S	Satin Nickel

Isolating Connector

This isolating connector joins sections of Rail and isolates power feeds from each other. All dual-feed canopies are shipped with an isolating connector; order isolating connectors if required by layout.

800RLCINC	FINISH
Z	Bronze
S	Satin Nickel

Flexible Connector

This conductive connector joins sections of Rail together end to end at desired sharp horizontal angle from 65° - 295°.

800RLCFXH	FINISH
Z	Bronze
S	Satin Nickel

Conductive Connector

This conductive connector joins sections of Rail together end to end electrically and is included with all Rail pieces. Order separately if cutting and rejoining rails.

800RLCCNS	FINISH
Z	Bronze
S	Satin Nickel

Standoffs

Use standoff supports every three feet of Rail run and at corners. Standoffs can be positioned over connectors where rails are joined.

TIP: For best appearance, place the last standoff 4-6" from the end of the Rail, and place standoffs symmetrically.

Adjustable Standoff

The adjustable standoff cable virtually disappears for a clean look. It is best used on fairly straight runs with a drop greater than 6". A wire grip allows you to easily shorten or lengthen the cable to size it for use.

800RLSADJ	LENGTH	FINISH
	12'	Z Bronze
	3 30'	S Satin Nickel

Rigid Standoff

The field-cuttable rigid standoff is recommended for curvy runs or runs with heavier elements, such as glass pendants. Rigid standoffs are compatible with various power feed options: use the chart below to determine the appropriate standoff for your run.

LENGTH	(A)	STANDOFF	FINISH	USED WITH

Special Installations

Installing a Rail System to a Vaulted Ceiling

To install a Rail system to a vaulted ceiling, add a power vault adapter to each power feed and add a standoff vault adapter to each standoff.

Power Vault Adapter

Installs to the power feed (sold separately) and adjusts to any angle to position Rail parallel to the floor.

800RLPVLT	FINISH
Z	Bronze
S	Satin Nickel

Standoff Vault Adapter

Installs between the rigid or adjustable standoff (sold separately) and the ceiling to position Rail parallel to the floor. Includes several rod lengths to achieve the proper pitch when used with a surface transformer.

800RLSVLT	FINISH
Z	Bronze
S	Satin Nickel

Using a Flexible Center Power Feed with Canopy

To be used with a remote transformer, the flexible center power feed with canopy brings power from a ceiling or wall mounted junction box to the Rail when the junction box is not located directly above the Rail.

Flexible Center Power Feed with Canopy

Mounts to a standard 4" square junction box with round plaster ring (provided by electrician). Includes 12' of field-cutable flexible leads.

800RLP4CEN	FINISH
Z	Bronze
S	Satin Nickel

Using a Direct-End Power Feed

The direct-end power feed brings power from a remote transformer to the Rail at an end of the run and mounts to a wall perpendicular to the run.

Direct-End Power Feed

Mounts to a standard 4" square junction box with round plaster ring (provided by electrician).

800RLP4CD	FINISH
Z	Bronze
S	Satin Nickel

Installing Rail to a T-Bar Drop Ceiling

To install a Rail system to a T-bar drop ceiling, add a T-bar connector to every standoff (sold separately). The T-bar clip twists into the slat. (Use only if local electrical codes allow).

T-Bar Connector

Specify 15/16" or 9/16" slat.

800RLTBAR	SLAT	FINISH
C	15/16"	B Black
9C	9/16"	W White

Using a "T" or "X" Connector

Use the special "T" or "X" connectors to make a clean splice into a straight horizontal Rail run. These connectors are conductive, so you may power the system from any of the runs.

"T" Connector

The "T" connector joins three pieces of Rail. The connector must be supported with three rigid or adjustable standoffs (sold separately, p. 17), each placed within 1' of the connector.

800RLCTT	FINISH
Z	Bronze
S	Satin Nickel

"X" Connector

The "X" connector joins four pieces of Rail. The connector must be supported with four rigid or adjustable standoffs (sold separately, p. 17), each placed within 1' of the connector.

800RLCTX	FINISH
Z	Bronze
S	Satin Nickel

Using a Power Jumper

Use a power jumper to transfer power from one Rail system to another.

Power Jumper

Includes 36" of field-cutable leads.

Easy Packs

Rail Hardware Pack

Includes all the hardware needed to install a nine foot Rail run. Surface transformer mounts to a standard 4" square junction box with round plaster ring (provided by electrician). Rail drops 3.5" from the ceiling. Includes three sections of 36" Rail, two decorative end caps, three rigid standoffs and one 12 volt, 150 watt electronic surface transformer. Order pendants and heads separately (opposite page). Dimmable with a standard incandescent dimmer. Matte Nickel finish only.

800RALHDW150N

NOTE: Easy Pack Matte Nickel finish does not exactly match the Satin Nickel finish featured in the Rail and MonoPoint sections of the catalog.

Recommended Configurations...

Important: Combined lamp wattage can not exceed 150 watts

Terra Pendant Pack

Add Terra pendants to the Rail Hardware Pack (opposite page). Includes one Terra pendant (35 watts max each) with 12 volt, 35 watt halogen bi-pin lamp with Pyrex glass shield and 5 feet of field-cutable suspension cable. Matte Nickel finish only.

800RALPP1TR	COLOR	FINISH
	WH White	N Matte Nickel

Fiero Pendant Pack

Add Fiero pendants to the Rail Hardware Pack (opposite page). Includes one Fiero pendant (35 watts max each) with 12 volt, 35 watt halogen bi-pin lamp with Pyrex glass shield and 5 feet of field-cutable suspension cable. Matte Nickel finish only.

800RALPP1FIE	COLOR	FINISH
	A Amber	N Matte Nickel

Sola Pack

Add Sola heads to the Rail Hardware Pack (opposite page). Includes one 3" Sola head (20 watts max) with glass shade and one 12 volt, 20 watt MR16 lamp. Matte Nickel finish only.

Transformer Information

Selecting a Transformer

The transformer is the key to a low-voltage system. It reduces standard line-voltage to 12 volts, which is safe to the touch. A 12 volt transformer can power a run with 300 watts per power feed (600 watts for dual-feed) running up to thirty feet in each direction from the power feed. The total output wattage of the transformer determines the total wattage of the heads or pendants that can be used on the system.

For example, a 300 watt transformer can power up to six 50 watt heads ($6 \times 50 = 300$).

There are several transformer options from which to choose. Knowing the advantages of each will help you to select the best transformer for your application.

Remote

Remote transformers are preferred for their clean look and range of power feed options. They are mounted in accessible locations, but out of view. Power is brought to the Rail system through a power feed canopy or other power feed option (sold separately).

VS.

Surface

Surface transformers are decorative and will be visible in the room. They are best suited for applications where there is an existing junction box in a finished ceiling. The surface transformer has an integral power feed—there is no need for a separate power feed; however, the surface transformer must be placed within range of the Rail system.

Magnetic

Magnetic transformers have historically been the choice of lighting professionals due to their reliability. We offer a wide range of output wattages for magnetic transformers. When dimming a magnetic transformer, it is important to use a low-voltage magnetic dimmer.

VS.

Electronic

Electronic transformers are much smaller and lighter than their magnetic counterparts and have the advantage of being resettable at the wall switch in the event of a system short circuit. We offer a 12 volt electronic surface transformer with 150 watt output that is dimmable with a standard incandescent or a low-voltage electronic dimmer.

All of our transformers comply with regulations established by the National Electrical Code, with a maximum wattage on a 12 volt system at 300 watts per feed.

About Surface Transformers

Surface transformers mount to a standard 4" square junction box with round plaster ring (provided by electrician). The surface transformer for a Rail system must be placed directly above the system. The surface transformer for an Accent Easy Kit must be placed within one foot of the system. Surface transformers have a specific minimum drop depending on the wattage of the transformer—

this dimension must be considered in determining how far the run will drop from the ceiling. Longer drops can be achieved by adding a power extender.

tiella's magnetic surface transformers come standard with an integrated debuzzing dimming coil to reduce noise when using a low-voltage magnetic dimmer.

About Remote Transformers

The remote transformer can be anchored to the wall or ceiling with screws or toggle bolts and should be installed no more than twenty feet from the power feed. It is important that the electrician supply the correct gauge of THHN wire from the transformer to the junction box to prevent excessive voltage drop, which can cause fixtures to appear dim. See the chart below for proper wire gauge. For optimum performance, remote transformers should be loaded to at least 80 percent of capacity.

Power Taps

Magnetic remote transformers have multiple secondary power taps to compensate for variations in voltage. An input voltage exceeding 120 volts may result in more than 12 volts on the system, which can shorten lamp life. Follow the installation instructions packaged with the transformer to determine which power tap to use.

Voltages

tiella transformers are standard for 120 volt input. Other input voltages are available upon request.

Low-Voltage Wire Size Table

Use to determine the correct THHN wire size for a recommended 3 percent drop in voltage at the specified wattage. The length shown is the length of wire from the transformer to the power feed.

12 VOLT	5 ft.	6-15 ft.	16-20 ft.	21-40 ft.	41-60 ft.	61-90 ft.
150 watt	#12 GA	#8 GA	#6 GA	#4 GA	#2 GA	#1 GA
300 watt	#10 GA	#6 GA	#4 GA	#1 GA	1/0	3/0

Dimming

All tiella transformers may be dimmed with the appropriate dimmer: a low-voltage magnetic dimmer for a magnetic transformer; a low-voltage electronic dimmer for an electronic transformer, or a standard incandescent dimmer where indicated. The dimmer is placed on the line voltage side of the input line. Consult each system section of the catalog for the compatible dimmer type. It is very important to use the compatible dimmer type: failure to do so will substantially shorten the useful life of the transformer.

Remote transformers are generally placed outside the room, so any buzzing that may be caused by dimming is not noticeable. If using a remote magnetic transformer and a buzzing noise is apparent, a debuzzing dimming coil may be wired in series on one of the 120 volt input lines. Select the correct dimming coil (see below) based on the wattage of your transformer.

Debuzzing Dimming Coil Alone
